IPM PARTNER® FIELD REPORTER

September 19, 2014

**Kern County** (Delano/McFarland): **CRS** – F4 Biofix 9/17, 1097 DD since start of previous flight. 5<sup>th</sup> flight is starting due to unusual September heat. This generation could cause a heavy fall punch.

**Tulare County** (NE Kingsburg area): **CRS** – F3 Biofix 8/23, 649DD. The flight is about 411 degree days ahead of normal. With normal temperatures, the next flight will begin October 13, which would be the earliest on record.

**We are pleased to announce the introduction of Trece’s new PHEROCON® Spotted Wing Drosophila, Drosophila suzukii, monitoring lure and trap.** The PHEROCON SWD lure provides significantly higher capture rates at least 2 weeks earlier than natural bait products currently in use. And, the PHEROCON SWD lure captures fewer non-target insects when used with either natural baits (such as apple cider vinegar) or neutral drowning solutions (such as antifreeze or soapy water). The controlled release lure lasts up to 30 days. Please contact Trece, Inc. at (918)785-3061 or your local distributor to place an order today!

**PHEROCON® CM-DA COMBO** multi-gender attractant for monitoring will give you a definite edge in your battle against the codling moth, your toughest competition. This lure has been proven to be the most effective codling moth lure on the market today. For more information on CM-DA COMBO lures, and how to interpret data from trap capture, contact Trece, Inc. at (918)785-3061.

The IPM PARTNER® Field Reporter™ will also be published on our website [www.trece.com](http://www.trece.com)
